

## **PAINT DISPOSAL TIPS**

To simplify the disposal of paint, paint thinner, shellac and varnish, one of the following methods can be used. Whichever method is selected, always use extreme care when handling the product.

- 1) Stir sawdust, kitty litter or oil dry into the container until the paint is covered then set in a well-ventilated area away from children and pets as well as potential ignition sources. Let the product stand until the mixture is completely dry. Once the product is dry, place in regular trash with the lid off.
- 2) Layer a corrugated cardboard box with newspaper, old carpet or any absorbent material. Pour paint into box and let dry completely. Place in trash.
- 3) Purchase a paint hardener from a hardware store. Follow directions. Once product is hard, place in trash with lid off.
- 4) Use paint as a primer.
- 5) Research product need with schools, theatre groups or paint / materials exchange programs. One person's trash is another's treasure.
