

Stay Cool with Summer Savings

Electric Heat Pump Incentives

Despite the name, electric heat pumps are not used for simply heating the home. They can be used for cooling during the summer as well. Its function is to move heat: either to bring it inside your home when it's cold or to move heat outside when it's hot. An electric heat pump is a singular system that can do this job while saving you energy costs. The Hastings Utilities Department has cash incentives to help you reach your energy goals at hastingsutilities.com.

Rain Sensor Rebate

A rainfall sensor is a device that turns off an automatic lawn sprinkler system when it rains. It prevents needless watering since Mother Nature has already taken care of the task. The sensor can significantly reduce your usage of water and therefore help to lower your monthly water bill. Find rebates at hastingsutilities.com.

Federal and State Incentives

There are several federal and state programs to help your home become more energy efficient. Weatherization Assistance Programs can help you install insulation, ventilation, weather stripping and more. Energy Star also provides a number of rebates on energy efficient appliances, so check out what they have to offer before you make your next big purchase. Learn more at hastingsutilities.com.

BECOME ENERGY EFFICIENT

- 1**  Install **solar panels** for renewable energy sources
- 2**  **Solar water heaters** and efficient water management systems can help **reduce energy costs**
- 3**  **Smart devices** monitor energy use and **reduce energy waste**
- 4**  **High performance windows, doors, insulation,** and **air sealing** provide better weatherization, ventilation, comfort, and energy efficiency
- 5**  Cut energy use **with energy efficient lighting** through LEDs and energy star appliances

ENERGY RESILIENCE - ENSURE YOU'RE READY FOR POWER OUTAGES
